

N.

N (En), the fourteenth letter of the English alphabet, is a vocal consonant, and, in allusion to its mode of formation, is called the *dentinal* or *linguinal* consonant. Its commoner sound is that heard in *ran, done*; but when immediately followed in the same word by the sound of *g* hard or *k* (as in *single, sink, conquer*), it usually represents the same sound as the digraph *ng* in *sing, bring*, etc. This is a simple but related sound, and is called the *gutturo-nasal* consonant. See *Guide to Pronunciation*, §§ 243-246.

The letter *N* came into English through the Latin and Greek from the Phœnician, which probably derived it from the Egyptian as the ultimate origin. It is etymologically most closely related to *M*. See *M*.

Those on whom Christ bestowed miraculous cures were so transported that their gratitude made them, *notwithstanding* his prohibition, proclaim the wonders he had done. Dr. H. More.

Notwithstanding was, by Johnson and Webster, viewed as a participle absolute, an English equivalent of the Latin *non obstante*. Its several meanings, either as preposition, adverb, or conjunction, are capable of being explained in this view. Later grammarians, while admitting that the word was originally a participle, and can be treated as such, prefer to class it as a preposition or disjunctive conjunction.

Syn. — In spite of, despite. — **NOTWITHSTANDING**. IN *SPITE OF*. Disparity. These words and phrases are often interchanged, but there is a difference between them, chiefly in strength. *Notwithstanding* is the weaker term, and simply points to some obstacle that may exist; as, I shall go, *notwithstanding* the rain. In *spite of* or *despite of* has reference primarily to active opposition to be encountered from others; as, "I'll be, in mail's *despite*, a monarch." "I'll keep mine own, *despite of* all the world." Shak. Hence, these words, when applied to things, suppose greater opposition than *notwithstanding*. We should say, "He was thrust rudely out of doors *in spite of* his entreaties," rather than "*notwithstanding*." On the other hand, it would be more civil to say, "*Notwithstanding* all you have said, I must still differ with you."

No-ti-with-stand-ing, *adv.* or *conj.* [Originally the participle of *withstand*, with not prefixed.] Nevertheless; however; although; as, I shall go, *notwithstanding* it rains.

O.

O (*ō*). 1. O, the fifteenth letter of the English alphabet, derives its form, value, and name from the Greek O, through the Latin. The letter came into the Greek from the Phœnician, which possibly derived it ultimately from the Egyptian. Etymologically, the letter o is most closely related to *a*, *e*, and *u*; as in E. bone, AS. bōn; E. stone, AS. stān; E. broke, AS. breccan to break; E. bore, AS. beran to bear; E. dove, AS. dūfe; E. toft, tuft; tone, time; number, F. nombre.

The letter o has several vowel sounds, the principal of which are its long sound, as in *bone*, its short sound, as in *not*, and the sounds heard in the words *orb*, *son*, *do* (*food*), and *wolf* (*book*). In connection with the other vowels it forms several digraphs and diphthongs. See *Guide to Pronunciation*, §§ 107-129.

2. Among the ancients, O was a mark of triple time, from the notion that the ternary, or number 3, is the most perfect of numbers, and properly expressed by a circle, the most perfect figure.

O was also anciently used to represent 11: with a dash over it (O), 11,000.

O (*ō*), *n.*; *pl.* O's or Oes (*ōz*). 1. The letter O, or its sound. "Mouthing out his hollow oes and aea." *Tennyson.*

2. Something shaped like the letter O; a circle or oval. "This wooden O (Globe Theater)." *Shak.*

O (*ō*), *a.* [*See* ONS.] One. [*Obs.*] *Chaucer.* "Alle thre but o God." *Piers Plowman.*

O (*ō*), *interj.* An exclamation used in calling or directly addressing a person or personified object; also, as an emotional or impassioned exclamation expressing pain, grief, surprise, desire, fear, etc.

For ever, O Lord, thy word is settled in heaven. *Ps. cxix. 89.*

O how love I thy law! it is my meditation all the day. *Ps. cxix. 97.*

O is frequently followed by an ellipsis and *that*, as in expressing a wish: "O [I wish] that Iahmael might live before thee!" *Gen. xvii. 18;* or in expressions of surprise, indignation, or regret: "O [it is sad] that such eyes should o'er meet other object!" *Sherridan Knowles.*

A distinction between the use of *O* and *oh* is insisted upon by some, namely, that *O* should be used only in direct address to a person or personified object, and should never be followed by the exclamation point, while *oh* (or *oh*) should be used in exclamations where no direct appeal or address to an object is made, and may be followed by the exclamation point or not, according to the nature or construction of the sentence. Some insist that *oh* should be used only as an interjection expressing strong feeling. The form *O*, however, is, it seems, the one most commonly employed for both uses by modern writers and correctors for the press. "O I am slain!" *Shak.* "O what a fair and ministering angel!" "O sweet angel!" *Longfellow.*

O for a kindling touch from that pure flame! *Wordsworth.*

But she is in her grave, — and oh
The difference to me! *Wordsworth.*

Oh for a lodge in some vast wilderness! *Couper.*

We should distinguish between the sign of the vocative and the emotional interjection, writing *O* for the former, and *oh* for the latter. *Earle.*

O dear, and O dear me! [corrupted fr. *F. O Dieu!* or *It. O Dio!* O God! O Dio mio! O my God! *Wymen*], exclamations expressive of various emotions, but usually prompted by surprise, consternation, grief, pain, etc.

Ob-ject-ive (ôb-jêkt'îv), *a.* [Cf. *F. objectif*.] 1. Of or pertaining to an object.

2. (Metaph.) Of or pertaining to an object; contained in, or having the nature or position of, an object; outward; external; extrinsic; — an epithet applied to whatever is exterior to the mind, or which is simply an object of thought or feeling, and opposed to *subjective*.

In the Middle Ages, subject meant substance, and has this sense in Descartes and Spinoza; sometimes, also, in Reid. *Subjective* is used by William of Occam to denote that which exists independent of mind; *objective*, what is formed by the mind. This shows what is meant by *realistic*, *objective* in Descartes. Kant and Fichte have inverted the meanings. *Subject*, with them, is the mind which knows; *object*, that which is known; *subjective*, the varying conditions of the knowing mind; *objective*, that which is in the constant nature of the thing known. *Trindenberg*.

Objective means that which belongs to, or proceeds from, the object known, and not from the subject knowing, and thus denotes what is real, in opposition to that which is ideal — what exists in nature, in contrast to what exists merely in the thought of the individual. *Sir W. Hamilton*.

Objective has come to mean that which has independent existence or authority, apart from our experience or our nature. Thus, moral law is said to have *objective authority*, that is, authority belonging to itself, and not drawn from anything in our nature. *Caldwood* (*Fleming's Vocabulary*).

3. (Gram.) Pertaining to, or designating, the case which follows a transitive verb or a preposition, being that case in which the direct object of the verb is placed. See *ACCU-SATIVE*, *n.*

The objective case is frequently used without a governing word, esp. in designations of time or space, where a preposition, as *at*, *in*, *on*, etc., may be supplied.

My troublous dream [on] this night doth make me sad. *Shak.*

To write of victories [in] or [for] next year. *Hudibras*.

Objective line (*Perspective*), a line drawn on the geometrical plane which is represented or sought to be represented. — **Objective plane** (*Perspective*), any plane in the horizontal plane that is represented. — **Objective point**, the point or result to which the operations of an army are directed. By extension, the point or purpose to which anything, as a journey or an argument, is directed.

Syn. — **OBJECTIVE**, **SUBJECTIVE**. *Objective* is applied to things exterior to the mind, and *subjective* to its attention; *subjective*, to the operations of the mind itself. Hence, an *objective* motive is some outward thing awakening desire; a *subjective* motive is some internal feeling or propensity. *Objective* views are those governed by outward things; *subjective* views are produced or modified by internal feelings. *Sir Walter Scott's* poetry is chiefly *objective*; that of Wordsworth is eminently *subjective*.

In the philosophy of mind, *subjective* denotes what is referred to the thinking subject, the ego; *objective* what belongs to the object of thought, the non-ego. *Sir W. Hamilton*.

Syn.—To attain; gain; procure; acquire; win; earn. See *ATTAIN*.—**TO OBTAIN**, *GAIN*, *EARN*, *ACQUIRE*.

The idea of getting is common to all these terms. We may, indeed, with only a slight change of sense, substitute get for either of them; as, to get or to gain a prize; to get or to obtain an employment; to get or to earn a living; to get or to acquire a language. To gain is to get by striving; and as this is often a part of our good fortune, the word gain is peculiarly applicable to whatever comes to us fortuitously. Thus, we gain a victory, we gain a cause, we gain an advantage, etc. To earn is to deserve by labor or service; as, to earn good wages; to earn a triumph. Unfortunately, one does not always get or obtain what he has earnestly desired. He obtains the information he desired; he obtains an answer to a letter, etc. To acquire is more limited and specific. We acquire what comes to us gradually in the regular exercise of our abilities, while we obtain what comes in any way, provided we desire it. Thus, we acquire knowledge, property, honor, reputation, etc. What we acquire becomes, to a great extent, permanently our own; as, to acquire a language; to acquire habits of industry, etc.

Oxide (ôks'îd or -îd), *n.* [F. oxygène oxygen + acide acid; cf. F. oxyde. The French word was correctly spelled *oxide*, till about the year 1840, when, in ignorance or forgetfulness of the true history and composition of the word, the orthography was changed to make it represent the *v* of Gr. *ôxys*, from which it was supposed to be directly derived.] (Chem.) A binary compound of oxygen with an atom or radical, or a compound which is regarded as binary; as, iron *oxide*, ethyl *oxide*, nitrogen *oxide*, etc.

In the chemical nomenclature adopted by Guyton de Morveau, Lavoisier, and their associates, the term *oxides* was made to include all compounds of oxygen which had no acid (F. *acide*) properties, as contrasted with the acids, all of which were at that time supposed to contain oxygen. The orthography *oxide*, *oxyd*, etc., was afterwards introduced in ignorance or disregard of the true etymology, but these forms are now obsolete in English. The spelling *oxid* is not common.

Ox-id-iz-able (ôks'îd-iz-â-b'l), *a.* Capable of being oxidized.

Ox-id-ize (-îz), *v. t.* [imp. & p. p. OXIDIZED (-îzîd); p. pr. & vb. n. OXIDIZING.] (Chem.) To combine with oxygen, or subject to the action of oxygen, or of an oxidizing agent. Specifically: (a) To combine with oxygen or with more oxygen; to add oxygen to; as, to *oxidize* nitrous acid so as to form nitric acid. (b) To remove hydrogen from (anything), as by the action of oxygen; as, to *oxidize* alcohol so as to form aldehyde. (c) To subject to the action of oxygen or of an oxidizing agent, so as to bring to a higher grade, as an *-ous* compound to an *-ic* compound; as, to *oxidize* mercurous chloride to mercuric chloride.

In certain cases to *oxidize* is identical with to *acidify*; for, in nearly all cases, the more oxygen a substance contains the more nearly does it approximate to acid qualities; thus, by oxidation many elements, as sulphur, nitrogen, carbon, chromium, manganese, etc., pass into compounds which are acid anhydrides, and thus practically in the acid state.

Oxy-gen (ôks'î-jên), *n.* [F. oxygène, from Gr. *ôxys* sharp, acid + root of *γενναω* to be born. So called because originally supposed to be an essential part of every acid.] 1. (Chem.) A colorless, tasteless, odorless, gaseous element occurring in the free state in the atmosphere, of which it forms about 23 per cent by weight and about 21 per cent by volume, being slightly heavier than nitrogen. Symbol O. Atomic weight 15.96.

It occurs combined in immense quantities, forming eight ninths by weight of water, and probably one half by weight of the entire solid crust of the globe, being an ingredient of silica, the silicates, sulphates, carbonates, nitrates, etc. Oxygen enters into combination with almost all elements (except fluorine), forming oxides, bases, oxyacid anhydrides, etc., the process in general being called *oxidation*, of which combustion is only an intense modification. At ordinary temperatures with most substances it is moderately active, but at higher temperatures it is one of the most violent and powerful chemical agents known. It is indispensable in respiration, and in general is the most universally active and efficient element. It may be prepared in the pure state by heating potassium chlorate.

This element (called *dephlogisticated air* by Priestley) was named *oxygen* by Lavoisier because he supposed it to be a constituent of all acids. This is not so in the case of a very few acids (as *hydrochloric*, *hydrobromic*, *hydric sulphuric*, etc.), but these do contain elements analogous to oxygen in property and action. Moreover, the fact that most elements approach the nearer to acid qualities in proportion as they are combined with more oxygen, shows the great accuracy and breadth of Lavoisier's conception of its nature.

Syn. — To cover; cloak; hide; extenuate; conceal. — **TO PALLIATE, EXTENUATE, CLOAK.** These words, as here compared, are used in a figurative sense in reference to our treatment of wrong action. We cloak in order to conceal completely. We extenuate a crime when we endeavor to show that it is less than has been supposed; we palliate a crime when we endeavor to cover or conceal its enormity, at least in part. This naturally leads us to soften some of its features, and thus palliate approaches extenuate till they have become nearly or quite identical. "To palliate is not now used, though it once was, in the sense of wholly cloaking or covering over, as it might be, our sins, but in that of extenuating; to palliate our faults is not to hide them altogether, but to seek to diminish their guilt in part." Trench.

Important extensions of it were also made by L. Meyer. By this means Mendeleeff predicted with remarkable accuracy the hypothetical elements ekaboron, ekaluminum, and ekasilicon, afterwards discovered and named respectively scandium, gallium, and germanium.

A vegetable; an organized living, generally without feeling and voluntary motion, and having, when complete, a root, stem, and leaves, though consisting sometimes only of a single leafy expansion, or a series of cellules, or even a single cellule.

Plants are divided by their structure and methods of reproduction into two series, *phlegmogenous* or *flowering plants*, which have true flowers and seeds, and *cryptogamous* or *flowerless plants*, which have no flowers, and reproduce by minute one-celled spores. In both series are minute and simple forms and others of great size and complexity.

As to their mode of nutrition, plants may be considered as *self-supporting* and *dependent*. *Self-supporting plants* always contain chlorophyll, and subsist on air and moisture and the matter dissolved in moisture, and as a general rule they excrete oxygen, and use the carbonic acid to combine with water and form the material for their tissues. *Dependent plants* comprise all fungi and many flowering plants of a parasitic or saprophytic nature. As a rule, they have no chlorophyll, and subsist mainly or wholly on matter already organized, thus utilizing carbon compounds already existing, and not excreting oxygen. But there are plants which are partly dependent and partly self-supporting.

The movements of climbing plants, of some insectivorous plants, of leaves, stamens, or pistils in certain plants, and the ciliary motion of zoospores, etc., may be considered a kind of voluntary motion.
